### Previous Feedback:

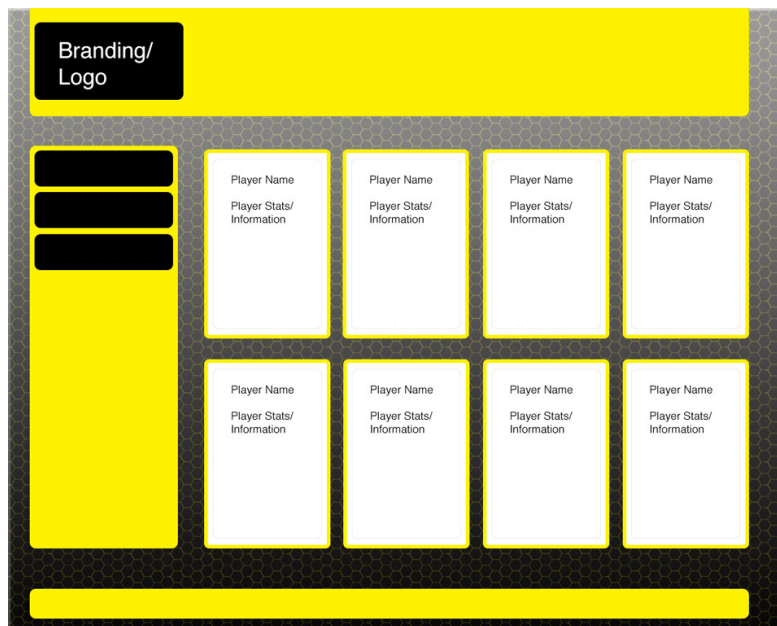

Gave some sites for AngularJS, and Bootstrap troubleshooting and helper aides. Provided a suggestion to use a honeycomb background with a link to a “How to video” with the utilization of the black for the background, to give the site a little more contrast and appeal.

### Rubric:

[https://docs.google.com/spreadsheets/ccc?key=0AokE7\\_zcDVWbdE05cHRVcXVNOVFsoEhkTzhJeFR3MkE&usp=sharin#gid=0](https://docs.google.com/spreadsheets/ccc?key=0AokE7_zcDVWbdE05cHRVcXVNOVFsoEhkTzhJeFR3MkE&usp=sharin#gid=0)

### Overall Application:

I feel that your WebApp is and will be appealing to anyone that would use it. To give your personnel or intended party a better User Experience, I would make the cards white; utilize the stroke being set to Yellow, with the black background. This would allow your individual cards to stand off the page and be easier to view as for right now the cards are kind of hard to read. To help with the contrast between the Cards and the background, maybe utilize a texture black honeycomb effect for the background. Here is what I was trying to explain...

If you like the layout and the design for it, here is the link to all of the files for the Style Tile...[https://github.com/jlynn81/MDD1403\\_TVApp/commit/ce13b876dc7fcc977fbc6689b75a1c2abde7cdfa](https://github.com/jlynn81/MDD1403_TVApp/commit/ce13b876dc7fcc977fbc6689b75a1c2abde7cdfa)

I thought that it stayed true to the utilization of your School Colors but pays tribute to them and doesn't hurt your users eyes upon viewing. Like I said, if you like it, it's yours 😊

Your thought pattern, and coding style is easy to follow and you are progressing with your WebApp, with a little more tweaking, it will be awesome and everyone would want to use it.

Great Job and Good Luck!
