Critique:
Style Tile Guide:

A. I think that you have a good start to the project for your theme to start from.
B. Your colors go well together but I would maybe change up your texture, I don't know if it is supposed to be shown as a matte black for all three but that is what I saw. Here is a link to a page where I found some textures for free... http://www.cgtextures.com/
I found it to be helpful with some of my projects and it also works great in that it allows you to pick the size you would like to download.

Team Page Style Tile:

A. Your Layout is good and it is easy to understand for the viewer.
B. In the big block are you going to put a logo or is there a different picture that is going to go there?
C. You went high fidelity for your wireframe layout but without the image, it is a standard wireframe. Try to go High Fidelity with your layouts so that it is more realistic for the viewer
D. Usage of colors is well played. Just a little side note would be that for it to be not as overpowering to the user, maybe use the yellow to highlight the Teams and information, Utilize the grey for the header. Here is a link that a previous instructor gave me for layouts and such. It might be helpful for you..

E. It is a good start, and like you said…with a little tweaking/flair it will look great

Listing Page Style Tile
- A. This has excellent color usage with the Yellow being the background color with the individual Team information utilized in the grey and the black being an accent piece

Detail Page Style Tile
- A. I have to say that yellow might be a little over powering for the user as a background on this page
- B. Maybe take the yellow and use it more as an accent for the Details
- C. I would say, play with the color utilization for better flow and ease of the eyes.

Aesthetically Your Project looks good and with a little bit of tweaking of the color placement or usage, it will be great.

Coding: There is none to critique

Logic: You have thought of everything for layout and placement and how your users would be able to move from one place to the next. It has a good flow of information and it would work for the purpose that it is intended for. I think that it will be a very usable tool for your users.
